

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) The ~~A~~ reservoir for multicomponent products consists of ~~comprising the a receptacle for the a basic component; the a cover, made in the form of a detachable connection with the receptacle; the a container for the an introduced component, said container placed in the an upper part of the receptacle container.~~ The basic ~~difference~~ of this reservoir is in the following: it has, wherein the reservoir has at least one channel for the an output of the an end product. There is, at least, one hole in the container; additionally there is a valve closing the hole of the container, wherein The the container and the valve are slidably connected with the possibility to be displaced one from the others such that either the container or the valve or both can move along the guide members and wherein The the cover can interact with the container and or the valve.

2. (Currently amended) The reservoir for multicomponent products of claim 1, which differs from the one described in paragraph 1 as follows: wherein the valve is set provided on the an outside-outer surface of the container.

3. (Currently amended) The reservoir for multicomponent products of claim 1, wherein which differs from the one described in paragraph 1 as follows: the valve is set provided on the inner side-surface of the container.

4. (Currently amended) The reservoir for multicomponent products of claim 2, which differs from the one described in paragraph 2 or item 3 in the following: wherein the upper part of the valve is made in the form of a neck.

5. (Currently amended) The reservoir for multicomponent products of claim 1, which differs from the one described in paragraph 1 in the following: wherein the guide members have the are in a form of a ring, zigzag, spiral, or have a rectilinear form.

6. (Currently amended) The reservoir for multicomponent products of claim 1, which differs from the one described in paragraph 1 in the following: wherein the guide members are formed by a part of the receptacle for the basic component or by the walls of the container and the valve.

7. (Currently amended) The reservoir for multicomponent products of claim 1, which differs from the one described in paragraph 1 in the following: wherein the container is made as an independent structural element or as an element of the receptacle.

8. (Currently amended) The reservoir for multicomponent products of claim 1, which differs from the one described in paragraph 1 in the following: wherein the valve is made either as an independent structural element, ~~or~~ as an element of the receptacle, or as an element of the container.

9. (Currently amended) The reservoir for multicomponent products of claim 1, which differs from the one described in paragraph 1 in the following: wherein the channel for output of the end product is placed inside the container.

10. (Currently amended) The reservoir for multicomponent products of claim 1, which differs from the one described in paragraph 1 in the following: wherein the channel for output of the end product passes through the valve.

11. (Currently amended) The reservoir for multicomponent products of claim 9, which differs from the one described in paragraph 9 or 10 in the following: wherein the reservoir additionally has a tube set in the bottom part of the receptacle; the tube reaches the channel for the output of the end product.

12. (Currently amended) The reservoir for multicomponent products of claim 1, which differs from the one described in paragraph 1 in the following: wherein the cover is connected to the container or to the valve with the possibility of a detachable connection.

13. (Currently amended) The reservoir for multicomponent products of claim 1, which differs from the one described in paragraph 1 in the following: wherein the cover is fixedly

rigidly connected to the container or the valve.

14. (Currently amended) The reservoir for multicomponent products of claim 1, which ~~differs from the one described in paragraph 1, 12 or 13 in the following: there is further~~ comprising an additional spring element ~~making possible for~~ the interaction of the cover with the valve or the container.

15. (Currently amended) The reservoir for multicomponent products of claim 12, which ~~differs from the one described in paragraph 12 or 13 in the following: wherein~~ a cover interacts with the container or the valve by its inner part.

16. (Currently amended) The reservoir for multicomponent products of claim 15, which ~~differs from the one described in paragraph 15 in the following: wherein~~ the inside part of the cover is flat.

17. (Currently amended) The reservoir for multicomponent products of claim 15, which ~~differs from the one described in paragraph 15 in the following: wherein~~ the inside part of the cover has a binding element.

18. (Currently amended) The reservoir for multicomponent products of claim 17, wherein ~~which differs from the one described in paragraph 17 in the following: the~~ binding element is made in the form of a push bar or a toothed member, or a spiking, or an advancing cam, or a retention pin, or a plug connector.

19. (Currently amended) The reservoir for multicomponent products of claim 12, which ~~differs from the one described in paragraph 12 or 13 in the following: wherein~~ a binding element is set on the container or the valve.

20. (Currently amended) The reservoir for multicomponent products of claim 19, wherein ~~which differs from the one described in paragraph 19 in the following: the~~ binding element is made in the form of a push bar or a toothed member, or a spiking, or an advancing cam, or a retention pin, or a plug connector.

21. (Currently amended) The reservoir for multicomponent products of claim 13, wherein ~~which differs from the one described in paragraph 13 in the following:~~ a removable cap is set on the cover.

22. (Currently amended) The reservoir for multicomponent products of claim 2, wherein ~~which differs from the one described in paragraph 2 or 3 in the following:~~ there are additional blades set on the inside part of the container and the valve blades.

23. (New) The reservoir for multicomponent products of claim 3, wherein the upper part of the valve is made in the form of a neck.

24. (New) The reservoir for multicomponent products of claim 10, wherein the reservoir additionally has a tube set in the bottom part of the receptacle; the tube reaches the channel for the output of the end product.

25. (New) The reservoir for multicomponent products of claim 12, further comprising an additional spring element for the interaction of the cover with the valve or the container.

26. (New) The reservoir for multicomponent products of claim 13, further comprising an additional spring element for the interaction of the cover with the valve or the container.

27. (New) The reservoir for multicomponent products of claim 13, wherein a cover interacts with the container or the valve by its inner part.

28. (New) The reservoir for multicomponent products of claim 13, wherein a binding element is set on the container or the valve.

29. (New) The reservoir for multicomponent products of claim 3, wherein there are additional blades set on the inside part of the container and the valve blades.
